Highlights

True color rendering

CRI (color rendering index) is a measure of how accurately a light is rendering objects' true colors. Standard LED interior light may make colors to appear unnatural. Philips high 90+CRI LED light allows objects' colors to appear clear and vivid, improving their appearance.

Less blue light emission

Blue light waves creates a glare that can reduce visual contrast and affect sharpness and clarity. This also may be one of the reasons for eyestrain, headaches, physical and mental fatigue. Sources of blue light includes computer screen, electronic devices, fluorescent-light and LED lights. Philips high 90+CRI LED light emits less blue light than standard LED interior light, for better eyes comfort.

Multi-sockets installation

Supplied with multi-socket options, to easily replace room lamp types T10 and festoon 30mm

12 year lifespan

High heat and vibration resist

3 year limited warranty

3 year limited warranty for consumer usage
