LED Backlight

LED backlight technology delivers stunning pictures with extreme contrasts, deep blacks, vivid details, and rich colors - all with less energy compared to a normal LCD TV of the same screen size.

Dynamic Contrast

This special picture processing technology seamlessly delivers vibrant images in bright scenes and reproduces deep blacks and accurate rendering of darker shades in dark scenes. You get clear images with enriched color and contrast for the ultimate LCD picture performance.

SRS TruSurround XT®

SRS TruSurround XT® creates a truly immersive surround sound experience with rich bass and clear dialog from only two speakers.

Dolby Digital

Dolby Digital, the world's leading digital multi-channel audio standard, makes use of the way the human ear naturally processes sound. With Dolby Digital you experience superb quality surround sound audio with realistic spatial cues.

HDMI Input

HDMI makes an uncompressed digital RGB connection from the source to the screen. By eliminating conversion to an analog signal, it delivers an unblemished image. The non-degraded signal reduces flicker and leads to a clearer picture. HDMI intelligently communicates the highest possible output resolution with the source device. The HDMI input is fully backward compatible with DVI sources and incorporates digital audio signals. HDMI uses HDCP copy protection.

VGA Input

VGA input provides a connector to accommodate input of an analog signal for use with a PC.

JPEG Photo Viewer

JPEG Photo Viewer displays photos stored on an external USB stick, letting you easily share memories with gathered family and friends.

Clear Pix Engine Plus

Clear Pix Engine Plus is a next generation system that optimizes your picture by reducing motion blur, enhancing contrast, sharpening detail and adjusting color.

Energy Star

Energy Star-labeled home electrical products are designed to use less energy - saving you money while reducing environmental pollution. In fact, Energy Star-compliant products consume less than 1 watt of power while in standby mode. This is achieved by having low standby power consumption through innovatively designed standby circuitry and stringent selection of components made with high efficiency materials.
