D

Set the display auto on/off by lighting

Tip

If the **[On - Set current]** brightness level is too close with the **[Off - Set current]** brightness level, the display Auto on/off function may not work.

You can use the default brightness of ambient lighting condition and you can also set the brightness of ambient lighting condition.

Step 1 In the main menu, select **[Setup]** > **[Options]** > **[Smart power]** > **[Lighting]**, then press **OK** to confirm.

Step 2 Select **[Settings]** and press **OK** to confirm.

- To use the default setting, select **[Default]** and press **OK** to confirm.

Step 3 Select **[On - Set current]** and press **OK** to confirm.

↳ The PhotoFrame wakes up when the brightness of environment reaches the **[On - Set current]** brightness.

- To have the PhotoFrame sleep at the set brightness of ambient lighting condition, select **[Off - Set current]**.

E

Set display auto on/off by time

Step 1 In the main menu, select **[Setup] > [Smart power]**, then press **OK** to confirm.

Step 2 Select **[Time]** and press **OK** to confirm.

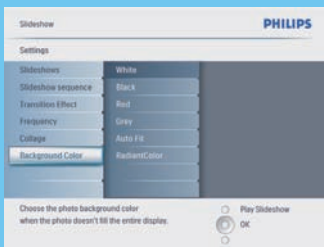

Step 3 Select **[Weekday]** and press **OK** to confirm. To enable the Smart Sleep function at weekends, select **[Weekend]**.

Step 4 Select **[Auto on]/[Auto off]** and press **OK** to confirm. To cancel **[Auto on]/[Auto off]**, select **[Set On/Off] > [Off]**.

Step 5 Press **▲ / ▼ / ◀ / ▶** and **OK** to set the time for auto-on function.

F

Set Radiant Color

Step 1 In the main menu, select **[Slideshow] > [Settings] > [Background Color]** then press **OK** to confirm.

Step 2 Select **[RadiantColor]** and press **OK** to confirm.

- If you select **[RadiantColor]**, the PhotoFrame extends the colour on the edges of a photo that is smaller than the full screen to fill the screen without black bars or aspect ratio distortion.

1

Set Auto Orientation function

Step 1 In the main menu, select **[Setup]** > **[Options]**> **[Auto Orientation]**, then press **OK** to confirm.

Step 2 Select **[Enable]** and press **OK** to confirm.

Troubleshooting

Problem

My Digital PhotoFrame does not go into Auto-off status after I set it.

My Digital PhotoFrame is ON but the system does not respond anymore!

My Digital PhotoFrame does not show some of my photos.

Why the photos distort?

What is the difference between background, Auto fit and RadiantColor?

Tip

Ensure that you set current time, **Auto off** and **Auto on** correctly.

- Ensure that the PhotoFrame is properly powered.
- Use a pin to trigger the **RESET** button located on the back to restore the PhotoFrame.

- The PhotoFrame shows photos in JPEG format.

If the format of picture is different as the PhotoFrame (for example, if you set "auto fit" on the PhotoFrame, a 4x3 photo input into a (16x9) PhotoFrame may distort. You can set a background colour or set RadiantColor. A background colour keeps the correct aspect ratio but may have black bar (or the background colour you select). We recommend you to select RadiantColor to keep the correct aspect ratio with the exterior of photo colour. RadiantColor does give you the best viewing experience. Users can go to: Main menu>Slideshow>Background>RadiantColor/Auto fit/black/red/gray.

If the picture format is different as the PhotoFrame, the PhotoFrame provides several solutions for it.

1. Auto fit: it is just like wide screen TV, the PhotoFrame extends the photo to fill fully the screen with picture distortion.
2. Background colour: the PhotoFrame displays a photo without distortion but with black bar or a selected background colour.
3. RadiantColor: the PhotoFrame displays a photo without distortion with RadiantColor. RadiantColor is a new technology that the system analyses the colour of picture edge and extend the colour to fill the screen. This does improve the viewing experience. Users can go to: Main menu>Slideshow>Background>RadiantColor/Auto fit/black/red/gray.
