Start the day your way

- Wake up to your iPod/ iPhone music or radio tunes
- Gentle wake for a pleasant waking experience
- Dual alarm to wake you and your partner at different times

PHILIPS

Highlights

Free DigitalRadio app

Tune in to radio extras with RadioVIS – a powerful feature provided by RadioDNS, an organisation that links DAB stations with the Internet. With RadioVIS, radio becomes a richer experience with real time Internet content. It specifies how web information is added to radio function, giving you DAB broadcasts accompanied by vivid slideshows of news, traffic updates, commercials and more, deepening the information radio stations provide. To enjoy RadioVis, simply go to the Apple App Store to download the free Philips DigitalRadio app. The app also hands you full control of all DAB+ and FM radio.

Play and charge your iPod/iPhone

Enjoy your favourite MP3 music while charging your iPod/iPhone! The dock lets you connect your portable device directly to the Docking entertainment system so you can listen to your favourite music in superb sound. It also charges your iPod/iPhone while it plays so you can enjoy your music and not have to worry about your portable player battery running out. The Docking entertainment system automatically

charges your portable device while it is docked.

FM digital tuning with presets

Digital FM radio offers you additional music options to your music collection on your Philips audio system. Simply tune into the station that you want to preset, press and hold the preset button to memorise the frequency. With preset radio stations that can be stored, you can quickly access your favourite radio station without having to manually tune the frequencies each time.

Bass Reflex Speaker System

Bass Reflex Speaker System delivers a deep bass experience from a compact loudspeaker box system. It differs from a conventional loudspeaker box system in the addition of a

bass pipe that is acoustically aligned to the woofer to optimise the low frequency roll-off of the system. The result is deeper controlled bass and lower distortion. The system works by causing the air mass in the bass pipe to vibrate like a conventional woofer. Combined with the response of the woofer, the system extends the overall low frequency sounds to create a completely new dimension of deep bass.

Auto clock synchronisation

When connected and docked, this docking system will automatically synchronise the clock with your iPod/iPhone within a few seconds. With this convenient feature, you do not need to set the time manually.

Dock iPod/iPhone in its case

Smartly designed spring-loaded docking port effortlessly accommodates any iPod or iPhone, without special adapters. What's more, it works even when most protective cases are on – just dock your iPod or iPhone as it is. Now you can truly have fuss-free enjoyment of your music.
