Product highlights

One remote control solution

The card will be supplied with a special guest remote control that allows you to offer digital TV without the need for an additional remote control.

Intuitive use of the TV

With this solution you can offer your guest digital TV without adding an additional set-top box in the room. The solution also provides the ability either to offer analogue and digital channels or to offer digital channels only.

TV clock synchronisation

If your hospitality TV has a clock, the DVB-T card allows you to synchronise the time with the digital source.

Extending lifetime

You can extend the lifetime of your Philips system Hotel TV by upgrading it to a stand alone digital Hotel TV instead of investing in a new digital TV.

Cloning of TV settings

Provides the ability to copy TV settings. The feature ensures uniformity between TV sets and significantly reduces installation time and costs.

Easy upgrade of system TVs

With the DVB-T card you can simply upgrade your analogue system TV to a digital stand alone TV. You will keep the hotel feature functionality as it is already available in the Hotel TV.

Tamper-proof

If there is a slot in your hotel TV, inserting the DVB-T Smartcard will create a tamper-proof solution. There is therefore no need for an additional power socket, cables etc.
