Highlights

Phone compatibility

Automatically transfer your measurements to the Philips HealthSuite health app on your smart phone, so you can monitor changes over time. Compatible with iOS 9.3 or higher/Android 4.4 KitKat or higher. For an overview of (in)compatible devices please have a look at www.philips.com/personalhealthcompatibility

Fast

Specially designed for speed and ease. Just one press of the button and you will have a reading in 2 seconds.

Easy and comfortable to use

The thermometer has a simple one-touch button and a probe tip that is comfortable to insert and suitable for use by all ages (newborn and up) No replacement caps required. Just clean the thermometer tip before usage.

Track your results over time

Determine your normal body core temperature so you can track and spot changes quickly and easily in the Philips HealthSuite health app.

Accurate

Body core temperature can be measured in five locations – the mouth, the ear, the armpit, the forehead and the rectum. In ear measurement (also known as tympanic measurement), along with rectum, is the most accurate form. The Philips ear thermometer uses this form to offer precise readings you can be confident are accurate. The thermometer offers accurate measurements of $\pm 0.4^{\circ}\text{F}$ ($\pm 0.2^{\circ}\text{C}$) within the range of 90.3°F – 109.3°F (32.4°C – 42.9°C).

Fahrenheit & Celsius

No matter whether you measure in Fahrenheit or Celsius, the Philips ear thermometer will give you the results you need in the scale you understand

Red LED display

The Philips ear thermometer has a clear LCD display so you can instantly see if the temperature reading is at normal* or raised levels. The light ring turns red for a temperature of 100.4°F (38.0°C) and higher. *Normal temperature ranges differ per age group. 100.4°F (38.0°C) is still within normal temperature range for babies.
