Highlights

High-definition iPod dock

The iPod dock features high-definition menus and HDMI connectivity so you can easily connect your iPod to your HDTV. This allows you to navigate and view your iPod music and videos in unbelievable quality.

Multiple connection options

Whether you have a high-definition TV and home stereo system, or a standard TV, there are plenty of connection options available to enjoy your docked iPod. Featuring HDMI, S-Video, Composite Video, Digital Audio and RCA Audio for multiple connectivity configurations.

Remote with RF technology

The remote control uses radio frequencies to transmit signals to the stereo, allowing you to control playback from the comfort of your couch, and even from room to room.

Upscales video via HDMI

HDMI is a direct digital connection that carries digital high definition resolution video as well as digital audio. The connection allows for transmission from a source device to a TV without the loss of image quality. With video upscaling, the resolution of standard definition video signals can be increased to resolutions up to 1080i. This results in a sharper, more true-to-life picture.
