Bass Reflex Speaker System

Bass Reflex Speaker System delivers a deep bass experience from a compact loudspeaker box system. It differs from a conventional loudspeaker box system in the addition of a bass pipe that is acoustically aligned to the woofer to optimize the low frequency roll-off of the system. The result is deeper controlled bass and lower distortion. The system works by resonating the air mass in the bass pipe to vibrate like a conventional woofer. Combined with the response of the woofer, the system extends the overall low frequency sounds to create a whole new dimension of deep bass.

3-step Dynamic Bass Boost

Dynamic Bass Boost maximizes your music enjoyment by emphasizing the bass content of the music throughout the range of volume settings - from level one to level three - at the touch of a button! You can customize the bass level that fits your style. Bottom-end bass frequencies usually get lost when the volume is set at a low level. To counteract this, Dynamic Bass Boost can be switched on to boost bass levels, so you can enjoy consistent sound even when you turn down the volume.

Interactive Dashboard Display

Interactive Dashboard Display is a visually attractive animated graphics display with volume meter. It gives you at-a-glance track and volume information using an attractive dashboard interface. Interactive Dashboard Display integrates a Fluorescent Tube Display (FTD) and a Volume Unit (VU) meter to display volume levels, useful track information and music amplitude during playback. The exciting animated graphics add to the overall 'feel' of the music.
