Highlights

Light wakes you gradually

The light intensity from your wake-up light gradually increases 30 minutes before your set wake up time. Light falls on your eyes and increases the level of energy in your body, gently preparing your body to wake up. This makes waking up a more pleasant feeling.

250 lux light intensity

The sensitivity to light differs a lot per person. In general, when using a higher light intensity a person needs less time to become fully awake. The light intensity of the Wake-up light can be set up to 250 lux. This makes sure you can wake up to the light intensity that suits your personal preference best.

2 natural wake-up sounds

At your set wake-up time, you will start hearing a natural sound or the selected radio station. It starts out quietly and takes a minute

and a half to reach the volume level you selected. There are two sounds you can choose from: morning birds and a beeping sound. The gradually increasing sound will make the wake up process even more pleasant, ensuring you're never rudely awakened.

Bedside lamp

The 20 different brightness settings allow you to use the product as a bedside lamp

Replaceable halogen lamp

The Wake-up Light makes use of a replaceable halogen lamp for natural sunrise simulation.

Independent research

Independent research* shows that 8 out of 10 Wake-up Light users found it easier to get out of bed. MatrixLab BE, NL, D, AT, CH 2011; n=209

Clinically proven

It has been clinically proven that light is a more pleasant way to wake up, and improves the quality of waking up.

Philips expertise

Brought to you by Philips, who has over 100 years of leadership in light therapy technology.
