PHILIPS

Sleep and Wake-Up Light

Simulated sunrise and sunset RelaxBreathe to sleep, Multiple lights and sounds, Midnight light & AUX cable

HF3650/60

Highlights

Simulate natural sunrise

The Sleep and Wake Up Light gradually increases before your alarm time. Over the course of 30 minutes, the simulation will start off a soft morning red and gradually increase to orange, until your room is filled with bright yellow light. This creates a natural stimulation to wake up, while your body is still asleep. By the time light has filled the room, natural sounds or FM radio completes your wake up experience, leaving you ready for the day.

Sunset simulation to sleep

The sunset simulation program prepares your body to sleep by gradually decreasing light and optional sound to your set duration, gently helping you to relax before you fall asleep.

With RelaxBreathe for sleep

Inspired by well-known breathing and relaxation exercises our light-guided wind-down function is

designed to help get you to sleep by helping you decompress from the day's activities and unwind. Follow one of seven rhythms of light intensity or sound with your breathing while keeping your eyes closed for a calm and peaceful transition from your day to your dreams

Midnight and reading light

When turned on in the middle of the night, the Connected Sleep and Wake Up Light provides a soft light that is just enough to let you find your way in the dark - without jarring your senses. The midnight light can be easily activated and deactivated with a few simple taps on the clock.

Smart touch display

Our seamlessly integrated multi-level touch display lets you set your chosen parameters intuitively and fast. Just approach the display with your hand and control your light with a touch on the buttons. The light will adjust the brightness of the display automatically to the light level in your room. You also have the option to switch off the display completely.

Tap to snooze

A slight tap on top of the wake-up light sets the snooze mode. After 9 minutes the sound will gently start playing again.
