

## Firmware information for Home Monitor M100

Firmware upgrade is performed through Philips In.Sight App.

This document contains two parts:

- Firmware history
- Instructions for firmware update

### Firmware history

Version 7.3 (except for /93, release Nov 2014)

- This firmware provides upgrade in the networking part of In.Sight camera to support changes in Dropbox requirements. It is highly recommended to apply the update before 17 Nov 2014 to keep Dropbox connection functional.

Version 7.0 (except for /93, release May 2014)

- Resumed video archiving service to Dropbox

Version 6.7 (release September 2013)

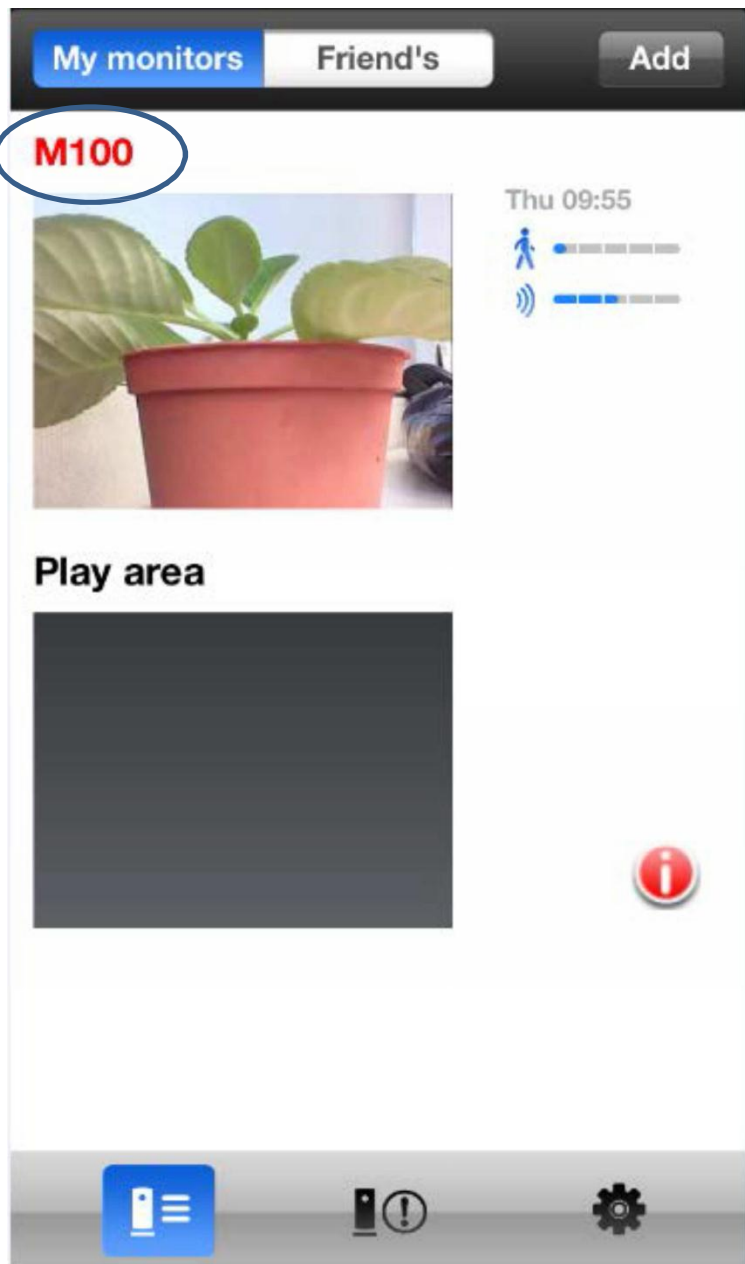

- Resolved the unexpected camera offline issue
- Improve the overall camera software performance

Version 6.5 (released March 2013)

- Improved Monitor set-up to Wi-Fi network
- Improved video streaming performance
- Dropbox video recording bug fixes
- Resolves displaying incorrect Monitor Time bug

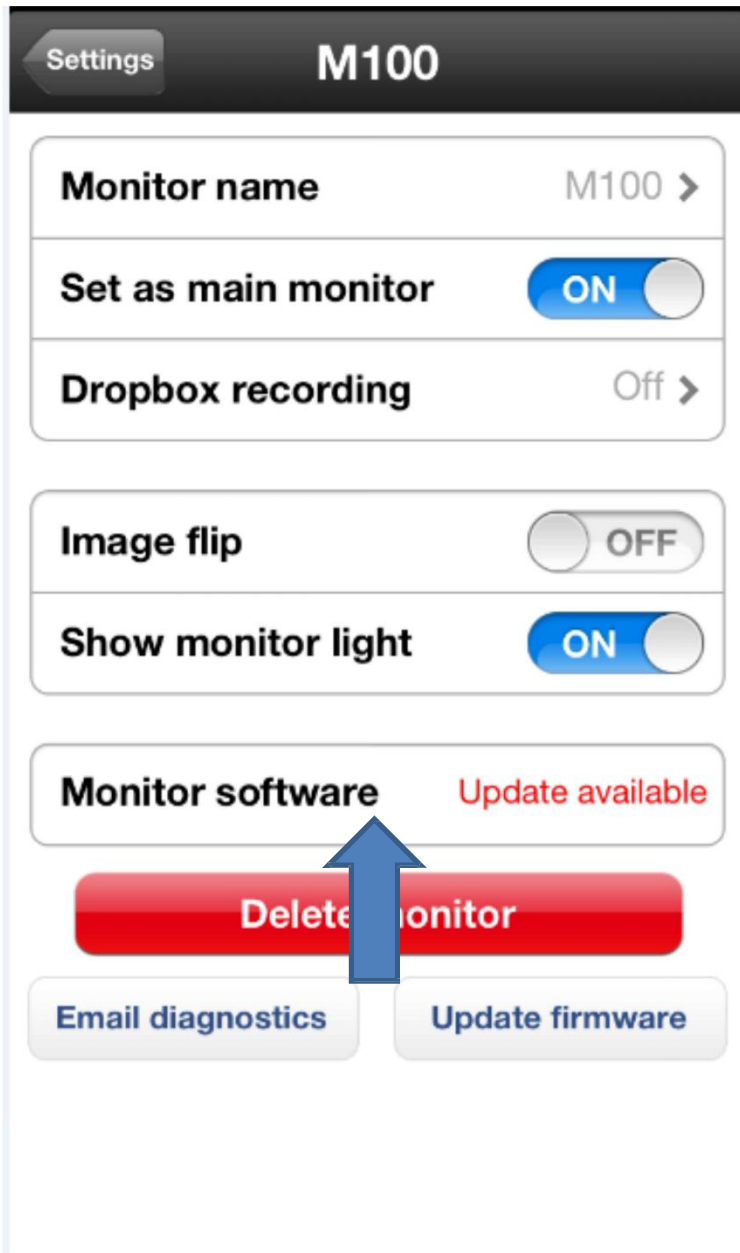

### [Instructions for firmware update through Apple version of Philips In.Sight App](#)

1. Make sure the Philips In.Sight App installed in your Apple device is of the latest version.
2. Make sure both of your In.Sight M100 Monitor and your Apple device are connected to the same Wi-Fi network. (In most cases this means both the M100 Monitor and Apple devices are connected to your home Wi-Fi network).
3. Start Philips In.Sight app. The monitor name is **RED** in color when there is new firmware for the monitor available.

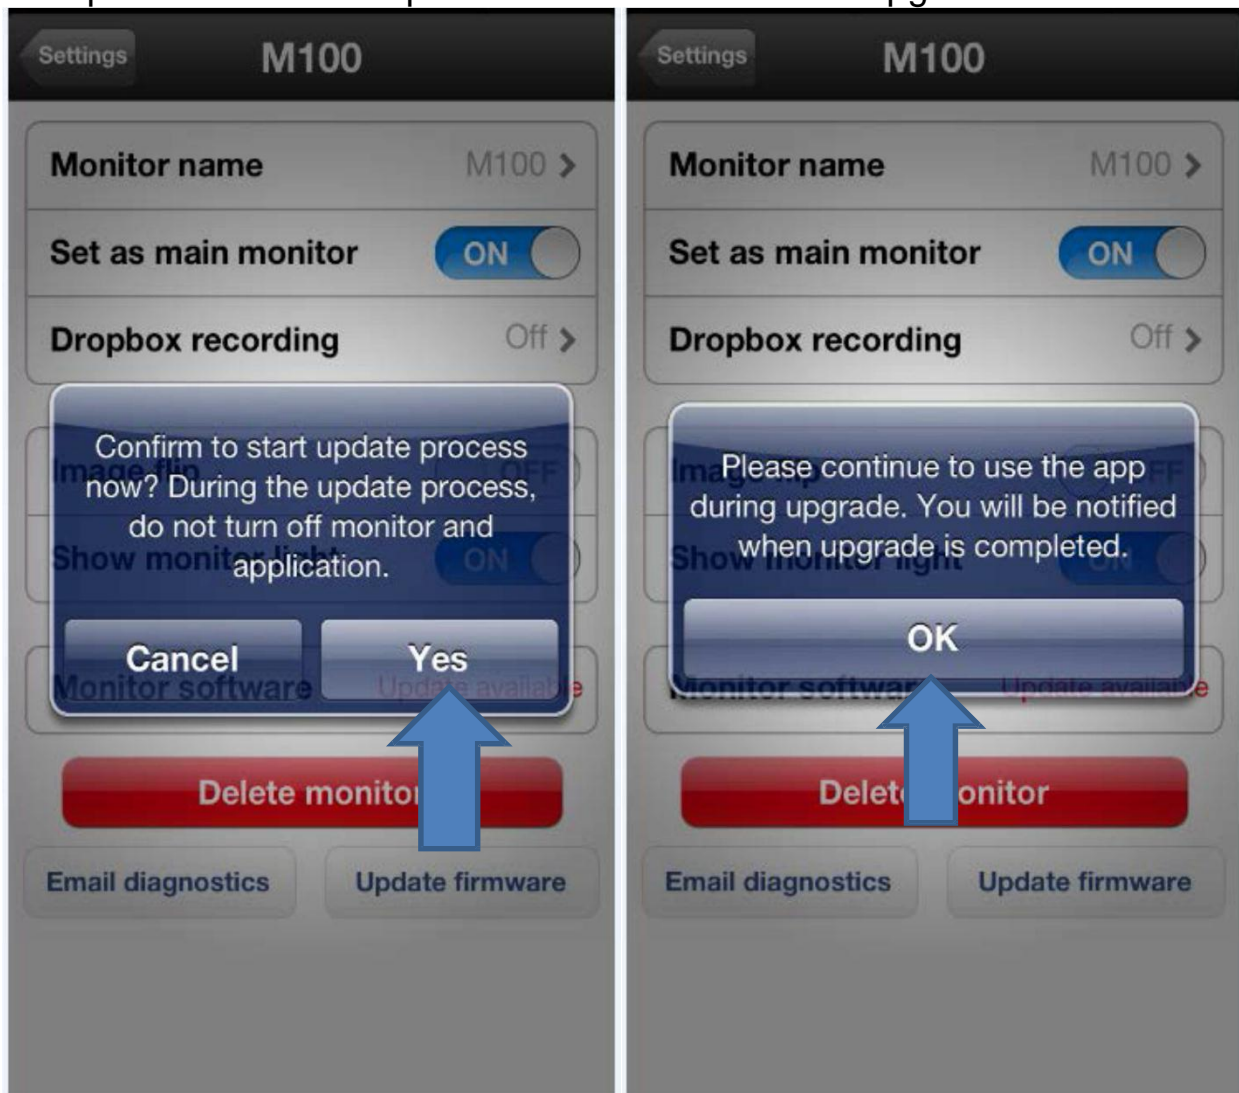

4. Go to the “**Settings**” page. Tap on the monitor for Software update.

5. Tap on “**Monitor software**”.

6. Tap **“Yes”** and then tap **“OK”** to start the software upgrade.

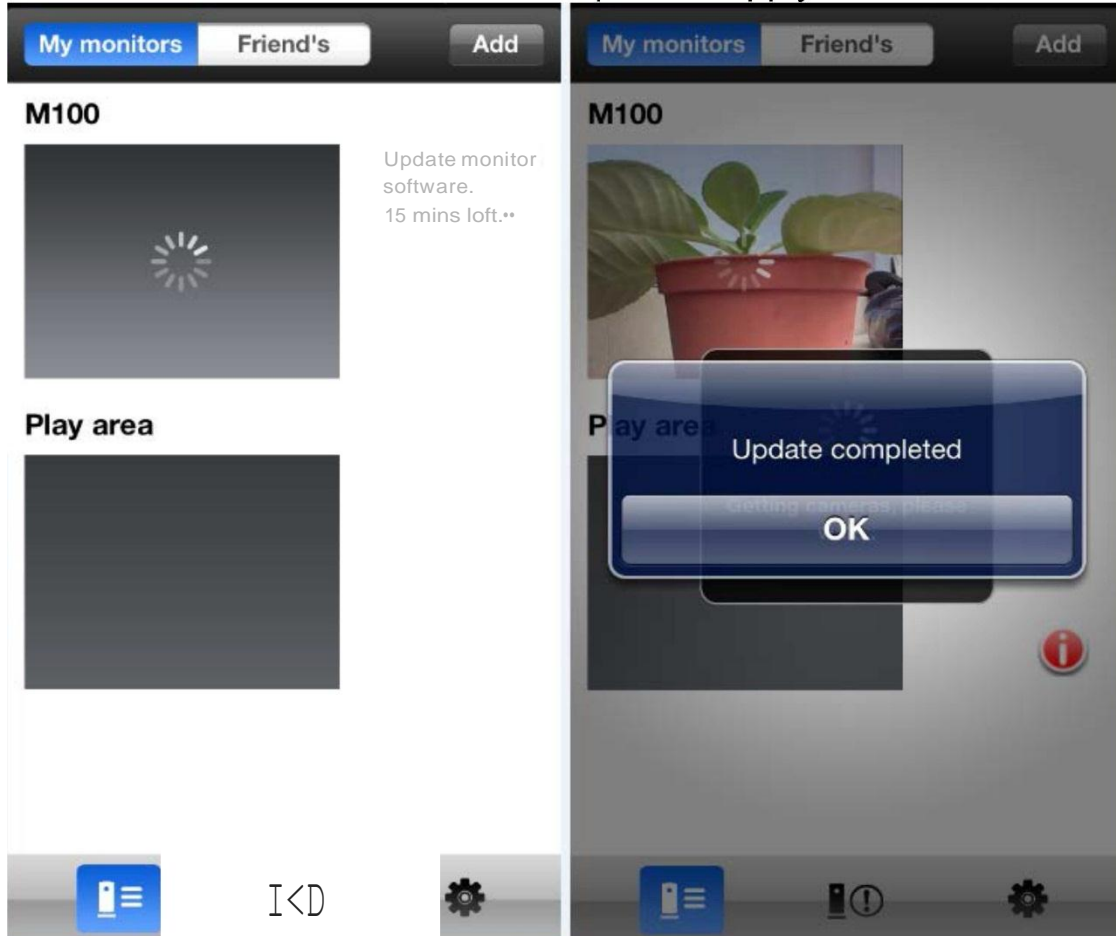

7. The firmware update can take up to 15 minutes.

Note:

During firmware update you cannot view the monitor.

Do not disconnect the monitor from power supply.

8. The M100 Monitor software is updated.
