

# Just add your TV for the Digital Cinema experience at home!

## Digital Surround Sound Receiver System

- 6 Speaker Package with 350 Watts Total Power
- All-in-one Integrated DVD/CD player, Digital Surround Sound Receiver
- Dolby Digital 5.1, Dolby Prologic & DTS channel decoder
- 5 2-way satellite speakers with 5 x 50 Watts equal power output
- 100 Watts subwoofer for deep bass
- Digital tuning with 40 presets
- Digital Audio output for perfect CD recording
- 2 audio inputs & 3 analog and 2 digital audio output connections
- 3 types video output connections
- DVD, DVD+RW, CD, CD-R, CD-RW and CD-MP3 playback
- Full function remote control, also controls Philips TV's
- Speaker wall-brackets, cables for TV hook-up and quick installation card included

Let's make things better.

### Sound Enhancement

**Dolby Digital Surround Sound** - Available on DVD, Laserdisc®, satellite broadcasts, Cable and as the standard for HDTV, Dolby Digital® offers the ultimate experience in home theater surround with six discrete channels of digital CD sound. Discrete means that each channel carries its own sound and depending on what happens on screen each speaker plays its own unique role in providing the right sound. Front left, center and right join two surround speakers to reproduce highs, mid and bass frequencies in five full-range channels of surround. Bass rumble, explosions and low frequency effects you feel are delivered through a dedicated sixth, subwoofer channel. Also known as AC-3 and Dolby 5.1, Dolby Digital® delivers the expanded sense of depth, localization and overall realism which was formerly only known from digital surround sound equipped cinemas.

**6-speaker package** - No less than 5 2-way satellite loudspeakers to build your personal cinema on a stand or wall-mounted with the enclosed wall-brackets. The five speakers are acoustically specially designed to match the tonal characteristics of the receiver. Front left, right and center speaker are magnetically protected to prevent any interference with television picture tube purity. The sixth speaker is a 100 watt powered subwoofer.

**350W surround power output** - The five, 3x50W (left, right, center) and 2x50W (rear), receiver amplifiers together with the 50W subwoofer amplifier deliver 350 Watts of home theater power. The stereo output power of 50W per channel is specified at 6 Ohm, 40Hz-20KHz and 10% total harmonic distortion (THD). The amplifiers have been designed with special attention to a short 'rise' and 'fall' time, so characteristic for the frequent and sudden drastic changes in dynamics of movie sound in general. Furthermore, the amplification reserves are designed such that they are more than sufficient to follow sudden needs for more sound pressure.

**100W powered subwoofer** - Subwoofers add dynamism to normal music and motion pictures. It sets the stage for a more intense sensation. The 100W Philips subwoofer features a down-firing 6 1/2" woofer to reflect sound waves off the floor, thereby adding impact. In all, the subwoofer is sufficiently power packed to generate that cinema essential sonic sound boom.

### Convenience

**Digital output** - 2 digital output connection (coax and optical) are foreseen to enable digital (CD) recordings from any of the sources.

**Night mode** - Establishes dynamic range compression of digital sound to reduce the volume differences between the loud and soft passages in source material with digital surround sound where sound level differences can be so dramatic. This feature is especially useful at night when you don't want to disturb the neighbors or wake up the kids!

**Video Connections** - 3 outputs (incl. monitor) are foreseen to hook up video sources. As these video inputs switch simultaneously with the audio inputs, correct picture with correct sound is guaranteed.

**Easy hook up** - With color coded speaker connections for quick and easy connection of all loudspeakers. By using distinct colors for each of the speaker connection terminal on the speaker and on the set, and using the same color for the cable, the chance of faulty connection (and customer complaints) are practically zero!

**40 tuner presets** - The available tuner presets can be randomly used to store AM and FM stations (40 in total).

**Display brightness adjustment** - Conveniently adjusts the brightness of the display in 3 steps.

**Standby power <1W** - To help save energy consumption, the standby transformer of this set and the powered subwoofer have been designed not to consume more than 2 Watt in standby mode.

**DVD Playback** - The DVD drive plays DVD, DVD+RW and Video CD discs as well as CD, CD-MP3, CDR and CDRW discs recorded on a CD recorder. The system has a full on screen display for easy set-up and operation. Other video features are zoom, multi-angle and parental lock.

**Digital output** - 2 digital output connections (coax and optical) are foreseen to enable digital (CD) recordings to eg. CDR.

Product Dimensions:

17.1" W x 3.1" H x 14.2" D (receiver)

3.8" W x 6.1" H x 3.7" D (l/r surround)

9.8" W x 3.7" H x 3.4" D (center speaker)

7.9" W x 12.2" H x 13.8" D (subwoofer)

DVD/Receiver weight : t.b.c.

Package Dimension: 21.3" W x 16.9" H x 19.4" D

Total package weight: t.b.c.

Container loading: 480 pcs (40' container)

Country of origin: China

Carton contains: DVD/Receiver MX3700, remote control, batteries, instruction for use, AM + FM antenna, quick installation card, warranty information, 6 loudspeakers (incl. subwoofer), loudspeaker cable (L/R: 2x9ft, C: 1x9ft, S: 2x33ft.), subwoofer + connection cable, digital audio cable, video cable
