 2. Press **▲** OR **▼** to select **System information**, press **OK**.
 3. Press **▲** OR **▼** to select **Device info**, press **OK**.
 4. Press **▲** OR **▼** to go to **Software version** and the software version number will be displayed in the highlighted field.
-

How do I update the software on my device?

Make sure that your NPI 100 has established a valid Internet connection with your router.

1. In active mode, press the **Settings** button on your NPI 100 remote.
2. Press **▲** OR **▼** to select **Software update**, press **OK**.
3. It will then check with the server whether there is a more up-to-date software available. In this case with a newer software available, the screen should show:

***Update is available. Do
you want to update your
device now?***

4. Click **▶** to select **Yes** to start downloading the new software via the Internet.
 5. After finish downloading the new software, the NPI 100 will automatically start updating itself.
 6. After the update has finished, device will restart and you can then enjoy the NPI 100 with the latest software.
-

Software update History
