Highlights

Home audio quality on the PC

Philips has used over 75 years experience at the leading edge of audio to create PC audio products with the same performance as our award-winning home audio systems.

Digital sound quality

Audio is transferred as a digital signal and only at the last minute is it converted to an analog signal. This reduces the amount of interference on the signal and results in playback that is true to the original recording.

Music, games, films, internet

All types of music, games, films and internet audio sources can be played, so no matter what you want to hear, we make your multimedia experiences sound more involving than ever.

Sound Agent 2

Sound Agent 2 is intelligent software that comes with a fun and easy-to-use graphical interface. It takes the confusion out of PC audio by automatically optimizing sounds for all popular formats. Sound Agent 2 makes it easy to fine-tune any audio performance to suit your personal musical taste.

QMSS

QMSS turns all stereo sources to convincing multi-channel surround, meaning that all games, music and movies can be heard in multi-channel surround sound, and not just in regular stereo.

5.1 channel playback

5.1 channel sound for reproduction of Dolby Digital® and EAX® sound sources

Coaxial Digital Audio SPDIF

An SPDIF coaxial cable is a highly reliable way of connecting digital audio.
