- System check light reassures you that the monitor is working

Convenience for you and your child

- Charging Base keeps batteries recharged and ready for use
- Simplifies the selection of the volume you prefer

Extra portability

Comforting your baby

Highlights

Automatic channel selection

This baby monitor guarantees that you only hear your own baby with perfect clarity. It does this by continuously checking and verifying whether it's the only device on the channel, and if not, it automatically switches to another. You don't even know it's happening! The result is perfect reception and optimum privacy.

Zero interference

Thanks to high-quality digital DECT technology originally developed for cordless telephones, you'll hear your baby via a clear interference-free link. And there'll be no interruptions, because other wireless devices will not disturb the link - and no one else can listen in either.

100 % Digital

Thanks to Digital Enhanced Cordless Telecommunication (DECT), a technology developed for cordless telephones, you are guaranteed the best possible reception quality with zero interference, and best of all, exclusive use of the channel so you only hear your baby. And no one else can hear you!

DECT technology

Digital Enhanced Cordless Telecommunications (DECT) technology, designed for cordless telephones, guarantees interference-free communication.

Battery-low indication

To know in time when the batteries need to be recharged or replaced.

DECT System Check

A 100% digital system that performs continuous checks to ensure that the parent unit and baby unit are within range and operating reliably. It has an audible and visual

signal to warn parents of communication link between the baby unit and parent unit is not reliable.

Privacy guaranteed

A secure channel between your baby and parent unit means privacy is guaranteed. It keeps your precious moments with your baby private.

System check alarm

The parent unit gives an audible alarm when it is outside the communication range of the baby unit or when the communication link is not reliable.

System check light

Green light on the parent unit lights when the connection between the baby and the parent unit is reliable and flashes when the parent unit is outside the range of the baby unit or when the communication link is not reliable.

Charging base

Thanks to the built-in battery charger in the base, you get extra freedom (when fully charged) to take the parent unit with you around the home and stay in touch with your baby. It's also a convenient place to store the parent unit, and ensure it's always ready for use.

Volume control

A handy rotary control sets the volume to the ideal level to suit your preference.

Sound-level lights

Sometimes it's a great help to 'see' when your baby makes a sound. This row of lights provide you with a clear visual indication.

Adjust Microphone sensitivity

Possibility to set the sensitivity of the microphone so you only hear the sounds you want to hear.

Intercom

To communicate with the children when they are older and do not need constant monitoring, but are able to call you with simply pressing the talk button on the baby unit.

Rechargeable Parent unit

Putting the parent unit on the charging base will automatically start recharging of the batteries, so it's always ready for portable use.

Single point control

Unique and revolutionary new way of controlling the baby monitor from your location. It allows control of the baby monitor from wherever you are for maximum convenience.

Extra small Parent unit

The parent unit is very small, so that you can put it easily in your pocket or clip it to your belt. Easy to take with you when you move around the house.

Night light

A soft, glowing light is reassuring and provides a focal point in the dark.

Talk-back to comfort baby

Not every situation means you have to go to your baby. The talk-back feature from parent unit to baby unit lets you comfort your baby with the soothing tones of your voice.
