AVENT

Anti-colic Bottle
AirFree vent

2 pcs

SCF411/01

Designed to reduce colic, gas and reflux*

Our unique AirFree vent is designed to help your baby swallow less air as they drink by keeping the nipple full of milk during feeding. Reducing the amount of air your baby ingests helps w/common feeding issues such as colic, reflux & gas.

AirFree vent designed for less air ingestion

- Nipple stays full of milk, not air
- Helps baby swallow less air with AirFree vent

Easy to assemble, use - and clean!

- Easy to clean & assemble, as AirFree vent is a single piece
- AirFree vent is one piece, simple to use

Additional benefits

- Compatible with all sizes Philips Avent Anti-colic bottles

Highlights

Nipple full of milk, not air

The nipple stays full even when the bottle is horizontal, so your baby can drink in an upright position. This can help reduce reflux, aid digestion, and make feeding time more comfortable for you and your little one.

Unique venting system

Our unique AirFree vent is designed to help your baby swallow less air as they drink, by drawing air away from the nipple. Reducing the amount of air your baby ingests can help with common feeding issues, such as colic, reflux and gas.

Easy to clean and assemble

The AirFree vent can be easily assembled with any Philips Avent Anti-colic bottle. And as the vent is one single piece, cleaning is a breeze.

Simple to use

While feeding, make sure the AirFree vent stays on top. This keeps the nipple full of milk, even when the bottle is held in a horizontal position, for easier upright feeding.

Compatibility

The Philips Avent AirFree vent is compatible with our 4oz / 125 ml, 9oz / 260 ml and 11oz / 330ml Philips Avent Anti-colic bottles.

* Our unique AirFree vent is designed to help your baby swallow less air as they drink by keeping the nipple full of milk during feeding. Reducing the amount of air your baby ingests helps w/common feeding issues such as colic, reflux & gas.
* At 2 weeks of age, babies fed with a Philips Avent bottle showed a trend to less colic compared to a conventional bottle and a significant reduction in fussing at night compared to babies fed with another leading bottle.
* What colic is, and how it affects babies? Colic is caused in part by swallowing air while feeding, which creates discomfort in a baby's digestive system. Symptoms include crying, fussing, gassiness and spit-up.
