## Highlights

### HeatProtect keeps both cool

You use your notebook on your lap to watch videos on a train, listen to music at the beach and browse the net, chat with friends or work on documents when you are at the airport. But over time the heat generated from sustained use makes your legs feel uncomfortable and could damage your notebook. With its 3 protective layers, the Philips HeatProtect™ Notebook Sleeve protects both you and your notebook from heat build-up when you are on the go, and its flat top surface provides good ventilation and keeps your notebook stable too.

### Hard top for your notebook

If you use a magazine as a desk on your lap it is very slippery and is not a stable surface for your notebook, especially when you want to assume a comfortable position for your body. And you might damage your notebook if it slides off. The Philips Notebook Sleeve has a flat top surface for your notebook and a soft underside for your lap, so you

can keep your notebook stable and secure while you watch YouTube, listen to music or work on documents anywhere you go.

### Soft fabric-lined material

Your notebook might get scratched by other hard surfaces in your bag when you put it into your notebook sleeve. The Philips Notebook Sleeve uses a suede-like material inside to protect your notebook and keep it cosy and scratch-free.

### Rubberised zips

Your netbook or notebook might get scratched by the zip head when you put it into your sleeve or bag. The Philips sleeve and bag use a rubberised zip puller to reduce the possibility of your netbook and notebook being scratched as well.
